

IN THE SPECIFICATION

Please amend the paragraph at page 12, lines 6-11, as follows:

Since the first and second user apparatuses UA and UB have the same configuration, the description uses the first user apparatus UA or the second user apparatus UB as an example. The description of the user apparatus UA applies to that of the user apparatus UB by replacing suffix A with B, and vice versa, i.e., elements 12B-16B are similar to elements 12A-16A and elements 21B-24B are similar to elements 21A-24A.

Please amend the paragraph beginning at page 34, line 18, to page 35, line 3 as follows:

In addition to the above-mentioned features, the reception processing section 20B' for the user apparatus UB has the following features. Namely, this section registers login information received from the trusted third party (TTP) to the storage section 11B. Further, the section performs login processing based on login information received from the user apparatus UA. Furthermore, the section deletes login information from the storage section 11B after login processing and during a period after completion of the verification by the tampering verification section [[21]] 21B and before transmission of a reception notification by the reception notification section 23B.
